

INNOVATION NO. 72

CLIENT: kicker.de

PROJECT: CMS integration with Livingdocs

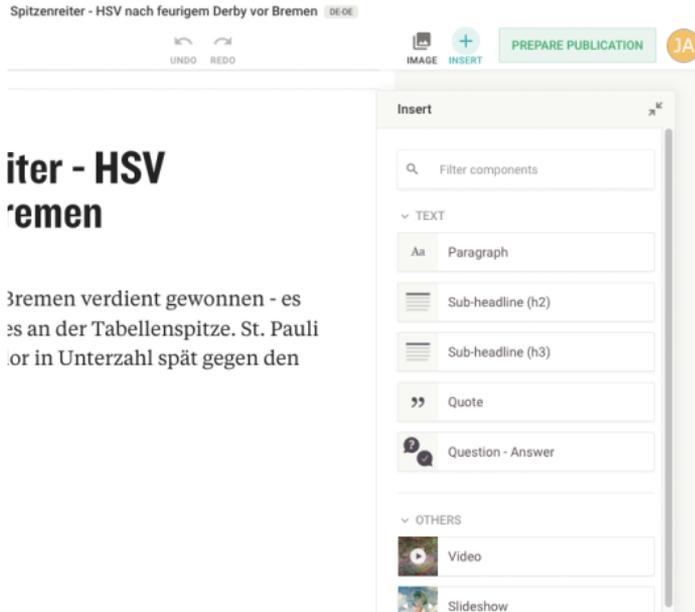

Image rights: Olympia Verlag GmbH

- jambit accompanied the product team of the kicker digital editorial office during the integration of the CMS product Livingdocs.
- The existing legacy system of kicker.de complicated the new development of features.
- Reliable technical implementation and consulting on processes as well as moderation of individual scrum events
- Daily communication created room for customer requests and reduced project risks.
- Development of customized software solutions for the platform: an additional microservice now takes care of special tasks related to article publishing.
- The new CMS provides an optimal basis for further development of digital journalism and can be easily extended for new forms of reporting.
- Methods & technologies used: Livingdocs CMS, Javascript, Typescript, Node.js, Angular, Vue, Nest.js, Docker, ElasticSearch, Agile approach, User Centered Design, Requirements Engineering

SUCCESS:

- Successful restructuring of one of the highest-traffic sports portals with two billion page views per month (as of 2021)
- Holistic support in the development process from agility to risk analysis to technology decisions
- Transparent and efficient moderation between customer and CMS provider Livingdocs
- Successful switching between different project phases from efficient development of large features to fast detail customization

„jambit is a reliable and experienced partner for CMS integration. Our wishes and requirements were realized with a lot of heart and soul. Together we identified and reduced project risks at an early stage. The jambit colleagues were motivated at all times, easy to reach, and contributed their own ideas.“

P. G., project manager
