

## INNOVATION NO. 73

CLIENT: Bildung & Begabung gGmbH

PROJECT: Digitization of an academy's educational offerings

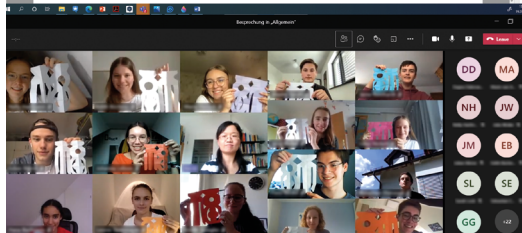

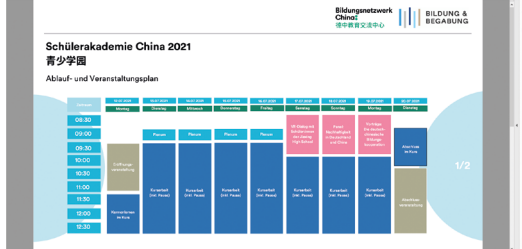

- Bildung & Begabung supports around 1,200 young people in several academy programs every year.
- Due to the pandemic, the institution quickly needed a learning and networking platform to make the educational offerings and their special character a digital experience.
- The administrators of the platform must set up and shut down a large number of accounts with differentiated authorizations for the courses in a very short time.
- Therefore, they needed a technically and cost-efficiently scalable solution.
- The jambit team set up the learning platform on MS Teams with Azure Active Directory and integrated other SaaS solutions.
- Administrative tasks were automated with Powershell.
- A cross-functional jambit team worked together with administrators and experts from the organization.
- Technologies and methods: Azure, O365, Powershell, Kanban

## SUCCESS:

- Thanks to the high degree of automation, Bildung & Begabung gains time to focus on the essentials: Optimal educational offerings for young people.
- jambit's solution offers cost-effective scalability of the digital offering.
- Our agile experts introduced the organization's team to agile work with Kanban.
- Low maintenance efforts ensure the future viability of the platform.
- The project was completed in budget and on time.
