-  500 g **Linsen-Teigwaren**
-  1 TL **Salz**
-  2,5l **Wasser**

 ZUTATEN AUSTAUSCHEN

ZUBEREITUNG

INNOVATION NO. 76

CLIENT: foodfittery – BSH Hausgeräte GmbH

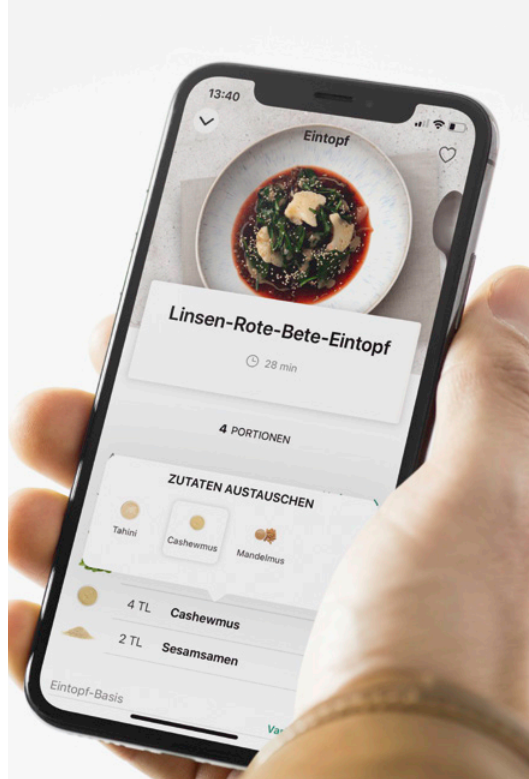

PROJECT: foodfittery App

- jambit develops the eponymous recipe app together with foodfittery.
- The foodfittery app focuses on flexible recipes with a modular structure. Users can adapt the recipes to their own needs and preferences. These can be defined, added and changed in their own profile.
- The different recipe variants are automatically generated in German and English using Natural Language Generation.
- Millions of recipe combinations create complexity in the backend. In addition to the ingredients, the app also customizes the utensils and preparations. Extensive testing ensures flawless functionality.
- In addition to app development, jambit is responsible for integrating the hardware. Users can control their Home Connect ovens at the touch of a button via the app.
- Technologies used: Java, Spring Boot, Gradle, PostgreSQL, Angular, GraphQL, iOS/Swift, Android/Kotlin

SUCCESS:

- jambit succeeded in developing solutions for the challenging issues. In particular, the technical complexity of the Natural Language Generation was solved.
- In October 2021, jambit and foodfittery successfully celebrated the go-live of the iOS app.
- Close exchange and mutual trust is the key to success for the cooperative partnership of jambit and foodfittery.
